

SYSTEMS IN BALANCE...

All systems need balance. We will be looking at balance in our lives as an entry into systems, levers and simple machines.

Students need to assemble a collection of personal artifacts.

These must be no larger than a tennis ball and weigh no more than a c-cell battery. Students will need at least 8, to as many as 12.

They should represent those things in life that we all must learn to balance. Jobs (school and chores), hobbies, and passions.

Artifacts for school might represent needs to reach future goals.

Artifacts for home jobs might represent home chores or responsibilities to family.

Artifacts for hobbies and passions will probably be the easiest...

These should be brought to class on Wed, Sept 5.

Those looking for a peek ahead can do a web search on Alexander Calder...
